

Take a closer look at your project dataset:

- **Link:** <https://www.kaggle.com/c/titanic>
 - **Who owns and maintains it?** Kaggle
 - **What kind of data does it hold? What data (or metadata) is not included?**
Passenger metadata; survivorship
 - **What are potential sources of bias?** Age of data
 - **What might a machine or human learn from this data?** Likelihood of survival
 - **What ethical impact and technical questions do you have about this data?** The impact of income level on survivorship. Should cruise ships be designed differently today?
-

- **Link:**
https://www.ftc.gov/system/files/documents/public_events/1548288/privacycon-2020-zia_d_obermeyer.pdf
 - **Who owns and maintains it?** US hospital system
 - **What kind of data does it hold? What data (or metadata) is not included?**
Patient metadata; risk score
 - **What are potential sources of bias?** Age of data
 - **What might a machine or human learn from this data?** Risk score, biased by racial/gender disparities
 - **What ethical impact and technical questions do you have about this data?** “At a given risk score, Black patients are considerably sicker than White patients, as evidenced by signs of uncontrolled illnesses. Remedying this disparity would increase the percentage of Black patients receiving additional help from 17.7 to 46.5%. The bias arises because the algorithm predicts health care costs rather than illness, but unequal access to care means that we spend less money caring for Black patients than for White patients. Thus, despite health care cost appearing to be an effective proxy for health by some measures of predictive accuracy, large racial biases arise.”

Take a closer look at your project dataset:

- **Link:** <https://www.kaggle.com/danofer/compass>
 - **Who owns and maintains it?** Kaggle
 - **What kind of data does it hold? What data (or metadata) is not included?** COMPAS (Correctional Offender Management Profiling for Alternative Sanctions)
 - **What are potential sources of bias?** Racial
 - **What might a machine or human learn from this data?** Risk score, biased by racial/gender disparities
 - **What ethical impact and technical questions do you have about this data?** “Black defendants were often predicted to be at a higher risk of recidivism than they actually were. Our analysis found that black defendants who did not recidivate over a two-year period were nearly twice as likely to be misclassified as higher risk compared to their white counterparts (45 percent vs. 23 percent). White defendants were often predicted to be less risky than they were. “

Take a closer look at your project dataset:

- **Link:** <https://www.reuters.com/article/us-amazon-com-jobs-automation-insight/amazon-scrap-secret-ai-recruiting-tool-that-showed-bias-against-women-idUSKCN1MK08G>
- **Who owns and maintains it?** Amazon
- **What kind of data does it hold? What data (or metadata) is not included?** Resumes
- **What are potential sources of bias?** Affluence and demographics
- **What might a machine or human learn from this data?** Hiring score, biased by racial/gender disparities
- **What ethical impact and technical questions do you have about this data?** “Amazon’s system taught itself that male candidates were preferable. It penalized resumes that included the word “women’s,” as in “women’s chess club captain.” And it downgraded graduates of two all-women’s colleges, according to people familiar with the matter. They did not specify the names of the schools.”

Take a closer look at your project dataset:

- **Link:** [NY Completed Percent for Art Projects | Kaggle](#)
- **Who owns and maintains it?** Kaggle, City of New York
- **What kind of data does it hold? What data (or metadata) is not included?**
This data set contains the current listing of Department of Cultural Affairs completed Percent for Art projects. Data from other cities is not included.
- **What are potential sources of bias?**
 - It is unsure if the source is very accurate for people from other states because it only has data from New York
 - Lack of diversity
 - Different genres
- **What might a machine or human learn from this data?**
Machines or humans might be able to see the amount of artists that have drawn artworks and might be able to compare the percentage with people from other states. This could help determine whether or not there are people(in states) that are more privileged than others.
- **What ethical impact and technical questions do you have about this data?**
 - Is there a certain extent to how creative AI machines/ techniques can be?

Take a closer look at your project dataset:

- **Group 6**
- **Link:** [LinkedIn Top Indian Startups 2022 | Kaggle](#)
- **Who owns and maintains it?** Kaggle
- **What kind of data does it hold? What data (or metadata) is not included?**
Has data on top Indian start-ups, about the most common skills, job titles, year founded, and more
- **What are potential sources of bias?**
IDK, Only in 2022, times will change and this data will not be forever , Limited to one racial group, only known bias
- **What might a machine or human learn from this data?**
Machines might be able to target which indian start-ups will have the potential, and so we can invest in it.
- **What ethical impact and technical questions do you have about this**

data?

- **If we follow this bias, some indian start ups might go unnoticed**
-

Take a closer look at your project dataset:

- **Link:** [Microsoft | Stock Market Analysis | Founding Years](#)
 - **Who owns and maintains it?** Microsoft
 - **What kind of data does it hold? What data (or metadata) is not included?**
Date of Listing (YYYY-MM-DD)
 - **What are potential sources of bias?**
 - **What might a machine or human learn from this data?**
 - **What ethical impact and technical questions do you have about this data?**
-

Take a closer look at your project dataset:

- **Link:** <https://www.kaggle.com/datasets/ratthachat/writing-prompts>
- **Who owns and maintains it?** Ratthachat Chatpatanasiri
- **What kind of data does it hold? What data (or metadata) is not included?**
Sample stories and story prompts
- **What are potential sources of bias?** No biases other than location bias, so possible culture bias
- **What might a machine or human learn from this data?** Information taken from this data would be the generated stories tailored to the users preference.
- **What ethical impact and technical questions do you have about this data?**
